

K&B Transportation, Inc Trailer Sanitation Policy

To our customers, who entrust us with their valuable products, K&B submits the following information relative to the steps which we take to provide trailer sanitation:

Carrier Trailer Sanitation Policy:

- ❑ The interiors of K&B refrigerated trailers are lined with materials compatible with the transportation of both raw and processed food products, and that allow for ease of cleaning and sanitation.
- ❑ K&B Transportation does not carry hazardous materials (hazmat), garbage or waste of any kind.
- ❑ All trailer interiors are thoroughly cleaned and sanitized during the performance of regular maintenance at the K&B terminal in South Sioux City, NE. Trailers are also inspected for any damage to trailer linings or door seals which could harbor or allow the infiltration of insects, or compromise the ability of the refrigeration unit to maintain a uniform temperature within the trailer. All defects are repaired before the trailer is allowed to return to service.
- ❑ K&B Transportation maintains a National Account with Blue Beacon Truck Washes. Trailers are washed on the road according to the following procedures:
 - Cold water washout when there is dry material on the walls or floor that cannot be swept from the trailer by the driver.
 - Hot water wash with soap when there is blood or other meat residue present, or the trailer has a noticeable or objectionable odor.
- ❑ Following an interior wash the reefer unit should be operated at 65 degrees to allow the interior to dry thoroughly prior to loading.
- ❑ All loads must be sealed as a means of insuring sanitary conditions inside the trailer are not compromised during transit. If a load is not sealed via shipper's seal, the driver must seal it with the provided K&B Seals. Refer to the procedures outlined in the K&B Transportation Load Security Policy.
- ❑ Each driver is briefed regarding this policy during the new driver orientation process.

Driver Responsibilities:

- ❑ Inspect the interior of each trailer after unloading or when picking up an empty drop trailer and communicate with dispatch the condition of the trailer interior.
 - Report any damage to the interior
 - Check that the air chute is properly attached
 - Remove, sweep if necessary, and properly dispose of any loose debris.
 - Note any residual odors
- ❑ Follow the dispatcher's instructions for having the trailer washed out, if necessary, prior to picking up the next load.

Proper Sanitation is a critical food safety issue. Failure to comply with this policy can cause shipper/customer issues and may result in a cargo claim of which a portion or all may be charged to the driver if it is shown that they were in violation of the company policy
